

FirstPROOF v3.1.1 Release Notes

The 3.1.1 release of FirstPROOF is a minor update containing a number of important bug fixes.

1. Changes and Fixes To FirstPROOF:

1. Enabling/disabling separations sometimes caused a crash in low memory conditions.
2. Proportional viewing at 25% and 50% sometimes got the size of the viewed image wrong.
3. Tiled TIFF files with any value for the Tile Height now work.
4. Tiled TIFF files with any multiple of 8 for the Tile Width now work.
5. The speed of down-sampling images has been optimized by between 5-30%.

2. Changes and Fixes To FirstPROOF Std:

n/a

3. Changes and Fixes To FirstPROOF Pro:

1. 'Find' now works correctly with an empty Input (that is an Input with no jobs in it).

4. Mac Changes and Fixes:

n/a

5. PC Changes and Fixes:

1. Potential crash when reading database from older or newer version of FP fixed.
2. Approving or Rejecting a job the first time (for an Input) no longer gives an error.
3. Issues with missing symbols on NT fixed – FP v3.1 on NT did not work.
4. Fixed various issues to do with the Close menu item being enabled when it should not be.

6. Other Changes and Fixes:

1. New OEM customization added.
2. ViewerAPI changes made, so that all the documented API calls are now implemented.
